

FSG-C Series of Field Signal Generators

The FSG series of Field Signal Generators complement Precision Test's FSM range of Field Strength Meters. The FSG series Field Signal Generators are synthesized units that will generate a CW signal over the +20 dBm to -20 dBm amplitude range. Parameters are set using the touch screen color display. The frequency can be adjusted in 500 Hz steps and the amplitude can be changed in 0.5 dB steps. Over ten different models cover the 20 MHz to 4 GHz frequency range. The FSG, when used in conjunction with a FSM Field Strength Meter, form a complete measuring system that is ideal in propagation studies of building and local areas.

- Many models to choose from covering the 10 MHz to 4 GHz frequency range.
- CW Signal Output from +20 dBm to -20 dBm switchable in 0.5 dB steps.
- Frequency range and step size can be altered to customer's requirements.
- Handheld portable units operating on rechargeable batteries.
- Typically three hours use between charges.
- Compliment Precision Test's FSM range of Field Strength Meters. Ideal for propagation studies of buildings and local areas.
- USB Interface with free software. Charge unit from USB interface.
- Solid metal case with soft case

Applications

The FSG Field Signal Generator when used in conjunction with the FSM series of field strength meters are ideal for the following applications:

1. Propagation study or mapping of radio systems including analog and digital systems.
2. Measurement of antenna performance of a cellular phone or two way radio.
3. Direction finding using a directional antenna.

The output of the FSG Generator is a powerful +20 dBm, and can be altered in 0.5 dB steps from +20 dBm down to -20 dBm.

The +20 dBm output level can be increased to 20W using the PA960B or PA2170 high power amplifiers.
